Comments: I oppose classifying any e bikes with mountain bikes. They have a motor and should be classified and licensed like a motor vehicle. They should continue to be allowed on trails that motorized use is allowed. Anyone who has ridden one would agree that they are not the same thing as a non pedal assist mountain bike. They are much heavier and allow a user to get into the back country further than self propelled bicycles creating many issues such as resource damage and the issue of a person not able to get back out. Please do not classify them as the same as non motorized. Thank you.
