Title:

Comments: Because of the quietness of these ebikes, there is a real safety concern of these bikes going too fast & coming upon slower moving equestrians/older hikers, especially on trails with short lines of sight. There could be seriously accidents, especially on single track trails with drop offers.

Also since these ebikes weight about 60 lbs, it should be considered that it would most likely be impossible for the ebike riders, to be able to haul their bikes out, should the bike become damaged; so trail damage is a real concern with having to drag these bikes out.
