Title:

Comments: I have been involved in trail development since 1968 in Northern Idaho. I have seen how the damaged caused by motorcycles has evolved. The large motor size of today's motorcycles allows them to destroy a trail with the simple twist of the throttle. They can dig a 3 inch trench without even realizing it. One motorcycle can do more damage to a trail than hundreds of mountain bike riders. So, I am against the proposed initiative that opens the trails to motorcycles once they are approved for Electric Bikes.
