Comments: I think e bike use on national forest trails should be extremely limited. Bike already cause trail damage especially to trails not specifically designed to accommodate bikes particularly erosion and causing the trail cross section to become u shaped making walking difficult. There are plenty of places to bike. Many fewer to hike. Bikes also have more negative interactions wild life as well as hikers since they can be quiet so no one knows they are coming. Please be very selective in allowing any e bike use where vehicles and other motorized vehicles are already allowed.
