Comments: E-bikes are a bad idea on large trail systems. They allow users to push further than their abilities allow. I have seen numerous e-bikes in locations that the user was not ready for. An example would be a users riding up a steep rocky section. With a standard bike the user would be limited going up. Now with a motor they can push uphill well beyond their ability and often become injured on the descent. I witnessed this at North Fork Park this summer where an e-bike users required EMS to rescue them with a broken leg. Let's keep ebikes on motorized trail systems where they belong.
