Comments: Class 1 ebikes should not be classified as motorized vehicles and should be allowed on every trail that a regular bike is allowed. Class 1 ebikes do not go downhill any faster than a regular bike. What is the problem with a little bit of pedal assist when you are going up steep mountains? Why should we limit people's options for recreation at a time when everyone is stuck behind the screen all the time? Not every one has the strength and stamina to pedal a bike up a steep mountain...
