Comments: Dear USFS,

Thank you for garnering comments from the public. EMtbs are not motorized vehicles. There is no gas pedal or throttle to propel the bike. EMtbs are pedal assisted bikes that fit neither the motorized or non-motorized categories well and deserve a new classification. I do not advocate for EMtbs to be on every non motorized trail but they do not need to be excluded either. I believe more consideration is needed to properly understand where EMtbs fit in. Many local organizations have been deep in this discussion as well as similar groups in Europe. Please consider further research and outreach to these groups before reaching any conclusions on this.

Respectfully,

JS
