Comments: For proposed directives FSM 7700 and 7710 E-bikes, project #ORMS-2619, it is important to designate trails specifically for use by Class 1, 2, and 3 types of e-bikes. There is a dramatic difference between assisted pedaling (eg, Class 1 and potentially Class 3) and fully-assisted without the need to pedal (eg, Class 2 - more like a motorcycle), and I am very concerned that the failure to discriminate for trail access will lead to over-use and wreckage of many trails and a loss of the ability to work into wild and more remote spaces, with potential repercussions that will affect access for biking. Please include the three class designations so that trail access can be managed smartly.
