Comments: I walk in the Cibola National Forest weekly on both walking trails and multi-use trails.

I favor class 1 e-bikes on all trails where mountain bikes may be currently used. This bicycle is really just an assist to the rider who still pedals.

Class 2 and 3 e-bikes are really better aligned with motor bikes and motorcycles. They are motorized vehicles and are best used on those trails and roads suited to motorized traffic. It makes little difference if the vehicle is powered by electricity or an internal combustion engine.
