Comments: eBike MTBs are motorized vehicles and are essentially electric dirt bikes. Multi use trails for hikers, normal mountain bikes and horses are not set up for eBikes. Ebikes will drastically increase erosion damage and personal injuries on the trail. Riders can travel a much higher speeds with eBikes. This higher speed results in much greater injuries in the inevitable crashes that occur. These crashes will also result in pollution on the trail with broken plastic, broken batteries or abandoned crashed eBikes. EBikers will also inevitably modify their machines to get more power out of them and ride higher powered machines in violation of whatever rules are established for the trail. Allowing any Ebikes will ultimately be a negative because this opens the door for bad eBikers to use the trail, damage the trail and push out non motorized trail users.
