Title:

Comments: It only makes sense to open up non motorized trails to ebikes if your ultimate goal is the abolition of any human powered travel. Do not do it! A motor is a motor. The USFS will not be able to control the amount of power these things have. Today they have relatively low power and a short range, These conditions will not last long. These machines will shortly have the capability of extreme speeds and long distances. PLEASE DO NOT OPEN THE DOOR.
