Comments: As an avid non motorized National, State and County Park trail user, I see many issues with allowing electric bicycles on non motorized trails. Fellow hikers and riders of horse are uses that require non motorized users on the trails. Speaking as a hiker and horseback rider, we are not compatible with electric bicycles. Electric bicycles are more suited for pavement than trails. Keep our non motorized trails for non motorized users! Electric bicycles are able to ride on paved BIKE trails, but where hikers would be run over and horses are not allowed. There is a reason some users are compatible and able to share trails, and there are safety reasons to NOT share trails with motorized electric bicycles. Don't allow this to move forward.
