Comments: At least allow class 1 e bikes. They do not have a throttle, they have speed sensors that wont let you go more than 20mph. Any bike can go over 20mph on downhills. Im bias as i have one, but ive had 2 hip surgeries and it allows me to get back out there and keep up with my husband. Its nothing like a moped or motorcycle. It simply assists with climbs when im struggling. Its enabling the elderly to ride bikes. You can ride longer. They dont damage the trail. Its simply a pedal assist. I would love to see this passed. Thank you.
