First name: Mary

Last name: McCullough

Organization:

Title:

Comments: Two reasons bikes and horses don't work well together.

1. Bikes tend to be slow going up hills/mountains

Horses go faster and need to keep moving in tight areas

2. Bikes go faster down hill and often do not watch out for horses as they are watching out for obstacles such as rocks, tree roots, etc. Bikes coming around a blind corner can't stop fast enough without possibly crashing into a horse or even trees. Horses go slower as they need to be able to navigate the trail safely.

This is an accident just waiting to happen.
