Title:

Comments: Please allow e bikes in areas that allow regular bikes. As an E bike rider, I receive an assist to get up a steep hill, but you would not notice if you observed me on the road, other than having a headlight. It does not make excessive noise to disturb wildlife or other bicyclists or walkers. Outlawing ebikes limits access to only young fit people. The regulators may have envisioned a moped or motorcycle. This is not the ebike experience. The ebike will "turn off" at 20 mph, so if someone is going faster, it is human powered.
