Comments: To Whom It May Concern,

Please DO NOT allow any form of e-bikes on non-motorized trails. I am an avid hiker, backpacker, and equestrian. I have seen numerous near catastrophic accidents on trails when even bicycles go too fast on multi-use non-motorized trails. My young daughters have had bicycles almost run them over. Can you imagine what would have happened with an electronic bike that goes faster and is extremely quiet? As an equestrian, our trail systems are already extremely blimited as compared to motorized trails and the amount of hiking and biking only trails. Horses are prey animals. They have their own mind and will run if threatened no matter how well trained. It is reassuring being able t9 ride them on jon motorized trails. Again, can you imagine what could happen when an e-bike goes fast down the trail and runs into a horse. A fatalnincident comes to my mind. E-bikes belong on motorized trails. Please DO NOT allow them on non-motorized trails.
