Comments: I feel there are far more places for motorized vehicles to be operated than there are opportunities for a non-motorized experience on public lands of all types. An electric motor is not a gas motor, but its still a motor. No eBikes of any category on non-motorized trails for me. If some categories of eBikes are allowed now what happens when manufacturers changes spec's and even more categories are created? And all of them clamoring to be allowed non-motorized status? There are lots of ATV, dirt bike and roads available on public lands, eBikes can ride there.
