Title:

Comments: As a Cascade resident, I am concerned that the Stibnite Project will degrade our community in a number of ways. As a trained environmental toxicologist, the most compelling rationale for this concern is the likely negative impacts of the project on water quality, fish, other wildlife, and air quality. This is notwithstanding the overall environmental impact on a longer timeline. Beyond that, the purpose of the project does not reflect a need of our community. For these and other reasons, I am against the project. Thank you.
