Comments: Taking horses out on trails there are many unknowns. This being said the most practical and safe trails to use with horses are those WITHOUT motorized vehicles that speed along and are a very real danger for spooking a horse. The proposal for allowing e bikes on these trails adds a very real, unsafe element to horseback riding on quiet/slow trails.

Even when hiking on foot, the non motorized trails you do not have to worry about someone flying around a corner or over a hill on top of you. These trails are a special place that you can get away from the noise and the dangers of higher speeding people.
