Title:

Comments: I do not believe the inclusion of ebikes on non motorized trails is acceptable. The spirit of mountain biking has been built on the effort it takes to power yourself up the mountain. This has developed a community of people who are willing to work hard for their rewards and appreciate the environment they are in. If we changes this we will be overwhelmed by people who will devalue or forward and trail access. If you make it easy enough for everyone to do it, you'll end up with everyone doing it, and our trails can't handle that demand.
