Comments: While I am generally a fan of e-bikes in general, I am concerned about allowing electric mountain bikes on wooded trails. My main concern is that e-bikes are being made in all kinds of motor sizes with e-bikes already available with 50mph top speeds. While there are different categories of e-bikes, it is IMPOSSIBLE to enforce the different varieties being permitted on trails. If e-bikes are going to be permitted on trails then YOU MUST BE PREPARED TO ALLOW EVERY SIZE of e-bike. It's like allowing motorcycles but trying to say that only motorcycles under a certain size are allowed. It's IMPOSSIBLE to enforce motor sizes when bikes are flooding the trails. I work at a bicycle shop that sells e-bikes and even those of us who sell these bikes have a hard time keeping track of the different class sizes and speeds that each class is capable of. Be prepared for e-bikes of every size and every speed, if you are going to allow e-bikes of any kind. Thanks for thinking ahead!
