Comments: I am not a fan of allowing e-bikes on single track mountain bike trails. In my experience with e-bikes on MTB trails, specially on multi-use trails, it appears that many of the e-bike riders are inexperienced and are usually travelling too fast for conditions. It seems that it's an accident waiting to happen. I believe that e-bikes belong on very wide trails or on e-bike only designated trails.

In addition, careful consideration should also be given to paved biking/walking trails. I live next to a paved bike path and again experience numerous riders going very fast. They can impose a hazard to other bikers and hikers when he/she can't handle sharp curves, congested areas or other issues that may require a quick response. Thanks for your consideration.
