Comments: I disagree with the use of electric bikes on non-motorized trails. It changes the overall usage of the trail systems it opens up the expansion for them to expand into other areas that should remain free of this type of bike. These bikes also pose a threat to horses and riders safety. It is already challenging to ride trails with fast flying mountain bikers that can surprise you at any moment. Whether it is a Electric or gas it is still motorized I disagree with the use of them on trails that are closed to motorized use.
