Comments: I do not support changes that would allow Ebikes on all trails designated for mountain bikes, horses and hikers only. An additional mode of transport would make trails more unsafe. No one currently regulates speed now. The addition of motorized(an ebike is motorized)bike travel just increases trail degradation as well. There is enough conflict between current users. Popular mountain bike trail use has made it unsafe and crowded out hikers in some cases. We need more strategic trail management that includes rerouting and revegetation efforts to conserve lands. I spend a lot of time on public lands. The lack of conservation and adequate management are huge issues. Don't keep adding problems that may lead to the addition of more evolving technologies to crowd trails.
