Comments: I do not feel that allowing e-bikes on any non-motorized trail is the right path to take. There's not enough people to enforce the different categories of e-bikes and it opens up the trails to all sorts of different electric vehicles in the future. Non-motorized trails should stay non-motorized. I do support the research to see the effect on the landscape though. I'm interested in seeing the difference between motorized and non-motorized vehicles effect on the environment and trails.
