Comments: Motorized vehicles, including e-bikes, should be confined to paved surfaces. Simple enough. The reaction time on a motorized conveyance is reduced, when meeting people, hikers, equine, that compressed time does not allow ample time for unexpected meetings in tight spaces. This is a legitimate bad idea. If there is that much want/need for e-bikes to be on trails, they need to have their own trail and they can fund it.

I spent 10 years getting separate horse and bike trails in Michigan, only after near fatal collisions the trails were separated.

Appreciate the opportunity for input.
