Comments: Current laws prohibit the use of motorized vehicles. Allowing motorized bicycles is going to cause more accidents in areas where emergency services cannot easily access. Current users have enough issues dealing with each other in a safe and agreeable way. Adding another type of user with a currently banned form of transportation due to them not being able to access the area isn't going to be safe. How are they going to be able to get out of the wilderness if their motorized bike breaks down? How will they safely maneuver off the trail to yield the right of way on steep dangerous terrain? What is the impact of use of the motorized bike in the wilderness? Current trail maintenance is done with hand tools because use of a chainsaw is prohibited - brief use to open trails not continuously using the chainsaw. No using motorized bike on trails, there was a reason why the rule was written to preserve and protect the wilderness leave it alone.
