Comments: The idea of motorized vehicles of any kind on non motorized trails is a slippery slope. As we move towards cleaner "fuels", more and more vehicles will be electric. Where and how do you draw the line?! Why are ebikes okay and not electric motorcycles? These vehicles must have the ability to go faster which can't be good for any of the other users of these trails. How much damage will be done to the trails from this type of vehicle. If this is a big user market, create specific trails for them.
