Comments: Electric bikes have no place on equine trails, atv trails, or snowmobile trails. It is far too dangerous to have a bike come up behind a horse at 10 to 20 mph and scare a horse, as this could easily result in a rider injury or death. Fat tire bikes have been riding on snowmobile trails where snowmobile travel at 50 plus mph, riders will die, it's already happened. An electric bike is no different then a moped or small engine mini bike, and those have no place on These dedicated trails either. The electric bike companies that are pushing for this need to find their own venue, and pay for it. They are clearly lining some government officials pocket to even have this considered a viable idea.
