Comments: I am fully against E bikes being allowed on non-motorized trails. There are plenty of roads and trails designated for motorized use. Allowing motorized vehicles on trails previously designated to be without will increase the amount of traffic on these trails. Increasing traffic on these trails will decrease the experience for everyone. One thing that is so great about this area is the ability to Recreate in our forests without the noise or hindrance of other people. Also by adding more people to our back country with motorized vehicles will affect the local fauna populations, of which the elk are already being impacted negatively. Our forests are delicate landscapes and there's something about needing to "work for it" to get there that makes people appreciate it more and treat it better. Allowing the ebikes will create an ease-of-use that will ultimately cause distress on our pristine forests.
