Comments: As a mountain biker of over 35 years and an eMTB'er I strongly support Class 1 ebikes being allowed immediate access to all trails accessible to MTBs. Ebikes have been a Godsend for people like myself to more fully explore the natural beauty of Colorado and experience the thrill of mountain biking. As a 60% disabled combat veteran I'm limited on the type and length of rides I once enjoyed. Ebikes allow people like myself to continue to enjoy riding for many more years than we normally would. As taxpayers we have as much right to these trails as anyone else. In fact, our demographic pays proportionally more taxes per person than most MTBers as they are generally much younger. The 2015 IMBA study on ebike trail impacts and my personal observation of local multi use trails show that there is almost zero additional trail impact. Furthermore, Class 1 ebikes are speed limited and offer no speed advantage going down hill.
