Title:

Comments: I am opposed to any further mining activity on the South Fork of the Salmon River. By far, for the greatest public good, the most sustainable long term option is to optimize the values of fish, wildlife and recreation. The short term mineral extraction project Midas proposes only puts at risk the millions of dollars already spent to stabilize this drainage from past mistakes. Stay the course of restoration work and watershed enhancement projects. Restore and re-wild this river! Thank you for your time. Brent Kahmann
