Comments: As members of the BCHA who actively participate in trail maintenance the impact of e-bikes on the trails is potentially devastating. They would impact the integrity of the trails not only directly but also indirectly by rain erosion. We own land in the MTNF and are very familiar with needing to prevent and combat erosion just on our farm. Our cattle and horses don't stress the ground the way e-bikes would. And as COVID-sensitive folks over 70 we plead for our naturally-isolated recreation opportunity in the beautiful Mark Twain. BTW--if we can't tie our horses to a tree why can e-bike riders take their bikes up a tree?
