Comments: Non motorized is non motorized, be it driven by gas or battery. Keep the e-bikes in the line-up with ATV/UTV status and only on ATV/UTV trails and roads. Mixing with horses isn't a good thing as I've seen bikers lay them down on the ground trying to stop them from plowing into riders. I've seen a 4 wheeler ride through a horse camp and scare a horse being lead by a parent with a small child in the saddle into bucking and the child gets launched. Also e-bikes can be ridden for how many miles? Where with horses 15-20 miles is a LONG ride for both rider and animal. Horse trails have such a small area vs. what E-bikes and ATV/UTV's can traverse. At times I know they will cross paths at intersections but not having to deal with that worry through the whole ride is a lot more relaxing and why the horse trails are being used. Granted there are good riders both motorized and non, but Please don't mix them.
