Comments: This comment is in opposition to any ebikes on trails. In fact even regular bikes can be hazards on narrow trails to people and pets. Hikers are expected to give bikes the right of way and we don't always know they are coming. Presumably ebikers are capable of walking or using regular bicycles. They can also use two track, gravel or paved roads. they don't care about the outdoors or wildlife. They focus solely on their equipment.

Please include in any evaluation, the impact of e-bikes on other users, the impact on trails, and the impact on wildlife as trails are expanded with social trails or widened and trashed through this additional and more harmful use.

If you do consider permitting them, please establish a fee system to offset their impact on trails and other users.

Frankly, I think all of us should be getting permits to help offset our use of public lands but definitely the demands and impacts of bikes will cause extensive damage.
