Title:

Comments: I oppose use of any and all motorized vehicles, including e-bikes of any type, on trails designated as non-motorized within lands administered for public use by various federal agencies. I say this as an avid mountain biker in his 60s who as I get older will someday likely welcome the advantages afforded by e-bikes. Nevertheless, simply put e-bikes of whatever type are motorized and therefore incompatible with trails meant for human powered recreation or horseback riding. There are numerous places currently designated for motorized vehicle use compatible with e-bike use. Expanding their use to areas currently designated for non-motorized use is a slippery slope that will be difficult if not impossible to reverse and will ultimately degrade the natural resource and recreational experience for the majority of users.
