Title:

Comments: As an equestrian, who shares the trail with hikers and bikers, adding electric or other motorized types of vehicles is death waiting to happen. Multi user trails are already, at times, difficult to navigate for equestrians as many hikers/bikes use no yielding to equestrians. We are forced to train our horses to ignore bikes riding up at fast speeds behind us with no warning, imagine having the added negative impact of greater speed and the additional noise of motorized or electric machines. Arizona is the best place in the US to ride. Don't eliminate our access to safe trails by adding speed and machines to the mix.
