Title:

Comments: I strongly encourage the US Forest Service to close down all mining activities along the Salmon River. The Salmon River watershed is a recreational hub for whitewater enthusiasts all over the world. This mine would put all of that at risk and greatly effect water quality. We have allowed similar mining projects in the past only to watch our rivers and mountains be negatively affected from pollution and wildlife habitat loss. Approving this mine would be a grave mistake for Idaho and for the quality of our rivers for future generations. Please vote against this proposed project.
