Comments: How many wheels does an electric bike have? If it's ever more than 2, then you will accidentally allow electric cars on these trails too. (I'll bet the current regulations don't talk about number of wheels)

The other reason this is a VERY BAD IDEA is you haven't solved a bigger problem yet...called lack of courtesy by the bike owners. I hike 3-5 miles EVERY DAY and am treated like a second class citizen by almost all bikers. They somehow believe they have the right-of-way...which is false. (some bikers even blow a horn and yell get out of my way) This problem will go from bad to worse with electric power and faster speeds.

Finally, I question whether the people making these laws and regulations actually USE the trails we are discussing. If you did, you'd see increasing erosion and degradation of many trails...which is caused by bikes!
