Comments: I fully support Class 1 ebikes on trails that traditional mountain bikes are allowed to ride. I have spent a significant amount of time riding both traditional mountain bikes and Class 1 ebikes. In my experience the speed differential between an ebike and a mountain bike is only existent when going uphill. We're talking a difference of maybe 4-5 mph which is not significant enough to cause additional user conflict. These are not eye watering speeds. I do, however, think it's important to differentiate between the three classes of ebikes as they really are quite different. I support giving Class 1 ebikes a non-motorized designation. Pedal assist only.
