Comments: I am strongly against allowing ebikes on FS trails because of the speed at which they can travel. I ride horses on these trails and it is so nice to have designated trails with no motors. An ebike has a motor. Yes it's electric but it Propels the bike up hills, giving the rider more speed than humanly possible. This can be extremely dangerous for hikers and horse riders in the narrow steep trails. I encourage that Forest Service trails remain as they are with no motors, electric or otherwise.
