Comments: Please do not allow e bikes on trails that are designated for non motorized vehicles. An electric bike has an electric motor, even if it is only ment to assist the rider.

Also people do not realize how quite that those bikes are when approuching from the rear. It is easily possible to be a safety hazzard if a hiker side steps into the bikers path without realising that the biker is behind them. This also would cause stock to panic and bolt away away from a perceived threat. This would put the rider of the stock and possibly the bike rider in danger of getting hurt.
