Comments: I am adamantly opposed to allowing e-bikes on non-motorized trails. They have an electric motor therefore by definition are motorized and should not be allowed. They travel much faster than other non motorized trail users and as their motors are quiet it is impossible to hear them approaching until they are upon you. This creates an extremely dangerous situation for other trail users, particularly equestrians. Allowing e-bikes on trails shared with equestrians is going to get equestrians injured or killed.
