Comments: Hello. As a mountain biker who enjoys the trails of backcountry and front country Montana, I feel as if at this point in time eBike have a healthy amount of trails upon which they can be ridden. Regardless of the classification in which the eBike falls, even if only a 20mph pedal assist bike, it is still a motorized vehicle. Yes, the motor is near silent, yes, you have to pedal to make it go, but is a motor nonetheless. As it is, eBikes can now ride on trails open to motorcycles, which are numerous. EBikes have their place, but I feel it is not on non-motorized trails. Keep the non-motorized trails for the people who want to travel through the woods under their own power. Thank you for your consideration in this matter.
