Comments: I am writing in regards to the Forest Service's proposed revisions to directives regarding management of electric bicycle use on National Forest System lands (FSM 7700 and 7710 E-bikes #ORMS-2619).

I respectfully ask that electric bicycles be removed from the definition of a "motor vehicle."

As a 60 year-old lifetime bike rider, I have been using my Class 1 e-bike to extend my cycling career and stay healthy. My e-mountain bike is exactly like an ordinary mountain bike in all respects, except it allows me to pedal the steepest hills without knee pain. As a lifelong taxpayer, I feel strongly that I should not be discriminated against for using a small electric motor to compensate for the effects of aging. Negative consequences of, in particular, Class 1 ebikes have been roundly debunked in multiple studies, both here and in other parts of the world.

Clear electric bicycle policies and rules will facilitate management, give more Americans opportunities to explore our public lands, and provide common sense solutions for pressing issues such as traffic congestion, parking, maintenance and emissions reduction. Forest Service policies and laws concerning electric bicycle use on public lands are outdated and are confusing for land managers, consumers, small businesses and local governments. These changes are a step in the right direction toward resolving that confusion, and it's necessary to properly define the three classes of electric bicycles consistently. Modernizing the definition of electric bicycles so that they may be used much like regular bicycles will encourage the safe use of electric bicycles and ensure more sensible access.

However, these proposed changes could result in a substantial number of non-motorized trails, paths, or roads being converted to motorized in order to allow electric bicycles - an unintended consequence and management strategy for the vast network of non-motorized Forest Service areas. Due to the risks associated with re-designating our non-motorized facilities as motorized, I do not support the proposed revised directives as written. Instead, electric bicycles should be removed from the definition of "motor vehicle" and considered a non-motorized use.

Electric bicycles are ridden, and should be managed, like traditional bicycles rather than motor vehicles. E-bike riders are similar to that of regular bike riders, and in most state and federal statutes, electric bicycles are defined as bicycles, excluded from motor vehicle classifications, and generally allowed on non-motorized trails.
