Comments: E Bikes are motorized vehicles and should not have access to non-motorized vehicle trails. Hiking is one of the great ways for children and adults to develop an appreciation of nature where one can listen and learn from fellow travelers, plants and animals.. Bikes do have there place but not on a hiking trail with children, adults and seniors moving at a much slower pace. Any bike can be disruptive and pose a danger to hikers do to the close proximity of the two activities and the speed in which each one is moving. Adding an easy way for more people to use the forest and mountains trails at the same time is a recipe for more disruption and accidents. Being at one with nature happens when one is in a safe and peaceful environment. It cant' happen if you are always looking around to be sure you aren't going to be run over by a biker who doesn't have to put in any effort to get where they want to go because they are on an electric bike..
