Comments: I strongly oppose the development of this gold mining project in the south fork salmon. This upper stretch of the salmon river drainage provides environmental resources including wildlife habit, free flowing and clean water of immense and irreplaceable value. I have floated the south fork salmon and will attest that this is a wilderness in the truest sense of the word that is worth preserving for future generations. The potential damage that this type of development can create is a risk that is simply not worth whatever value the project may offer economically.
