Comments: Please do NOT allow Midas Gold to mine gold from the South fork of the Salmon River. Gold is not a strategic mineral, and damaging this wild river for mining of a mineral used primarily for jewelry is thoughtless. Midas Gold makes false claims about withdrawing antimony from the mine, but they project that 95% of their profits will be in gold, not antimony, which is not mined anywhere in the USA because it is not economical to do so. In reality, Midas Gold will make 100% of their money from gold. This is simply an excuse to make money from pretty jewelry at the expense of our wild places.
