Last name: Cosdon

Organization:

Title:

Comments: Save the South Fork! Groundwater quality and quantity will be adversely impacted by the project. These impacts will then affect surface water which in turn affects aquatic organisms. This project will adversely affect bull trout, Chinook salmon, steelhead, and their critical habitats; and may indirectly impact Westslope cutthroat trout. These are only a few items on the long list of negative impacts the Stibnite Gold Project would have on the Payette National Forest and is why this project should not be allowed to move forward.
