Comments: The south fork salmon is truly a gem river for so many reasons. I have only experienced the area through recreation, there is something special about this river. Do not allow mining in the head waters as it in dangers the recreational potential of this area. People travel all over to get to experience the south fork salmon. Although I have only a recreation stand point I also know that the river provides great habitat for fish. I have experienced this first hand. Allowing mining around this river will have negative impacts and should be reconsidered. Have you preformed a economic analysis for the recreational this area provides in which mining would destroy?
